7-ACYLAMINO-3-SUBSTITUTED CEPHALOSPORANIC ACID DERIVATIVES, PROCESSES FOR THEIR PREPARATION, PHARMACEUTICAL COMPOSITIONS CONTAINING THEM AND THEIR STARTING COMPOUNDS

The present invention relates to novel 7-acylamino-3-substituted cephalosporanic acid derivatives and pharmaceutically acceptable salts thereof.

More particularly, it relates to novel 7-acylamino-3-substituted cephalosporanic acid derivatives and pharmaceutically acceptable salts thereof, which have antimicrobial activity, to processes for the preparation thereof, to a pharmaceutical composition comprising the same, and to a method of using the same therapeutically in the treatment of infectious diseases in human being and animals.

Accordingly, one object of the present invention is to provide novel 7-acylamino-3-substituted cephalosporanic acid derivatives and pharmaceutically acceptable

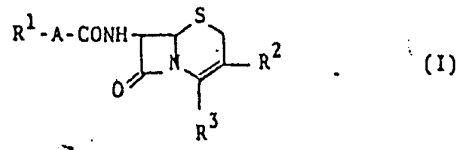
salts thereof, which are highly active against a number of pathogenic microorganisms and are useful as antimicrobial agents, especially oral administration.

Another object of the present invention is to provide processes for the preparation of novel 7-acylamino-3-substituted cephalosporanic acid derivatives and salts thereof.

A further object of the present invention is to provide a pharmaceutical composition comprising, as active ingredients, said 7-acylamino-3-substituted cephalosporanic acid derivatives and pharmaceutically acceptable salts thereof.

Still further object of the present invention is to provide a method of using said 7-acylamino-3-substituted cephalosporanic acid derivatives and pharmaceutically acceptable salts thereof in the treatment of infectious diseases by pathogenic microorganisms in human being and animals.

The object 7-acylamino-3-substituted cephalosporanic acid derivatives are novel and can be represented by the following general formula:



(I)
